On viewing the published paper the authors have advised that the sample size has been presented incorrectly.

Page 561, left column, first line, $n = (Z_{1-\beta} + Z_1 -)^2 \div d^2$ should be $n = 2\sigma (Z_{1-\beta} + Z_1 - \frac{\alpha}{2})^2 \div d^2$.

The authors advise this has no affect on the results of the work.
