RETRACTION

NELA Risk Calculator Significantly Underestimates Mortality Risk of Laparotomy for Mesenteric and Colonic Ischaemia in Older Adult Surgical Patients [Retraction]

Connell L. Open Access Surgery. 2023;16:1-6.

At the authors request, the Editor and Publisher of *Open Access Surgery* are retracting the published article. The author informed the journal that an ethics request to perform the study was submitted to the local ethics committee as per the hospital policy. Unfortunately, the request was not processed, and a misunderstanding led the author to believe the study had been approved, when in fact no approval had been provided. The ethics approval number provided in the article is not an approval number but rather a processing number. As the study did not receive the appropriate ethics approval prior to commencement the author requested to retract the article and the Editor and Publisher agreed with this decision.

We have been informed in our decision-making by our editorial policies and the COPE guidelines.

The retracted article will remain online to maintain the scholarly record, but it will be digitally watermarked on each page as "Retracted".

Publish your work in this journal

Open Access Surgery is an international, peer-reviewed, open access journal that focuses on all aspects of surgical procedures and interventions. Patient care around the peri-operative period and patient outcomes post-surgery are key topics for the journal. All grades of surgery from minor cosmetic interventions to major surgical procedures are covered. Novel techniques and the utilization of new instruments and materials, including implants and prostheses that optimize outcomes constitute major areas of interest. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit http://www.dovepress.com/testimonials.php to read real quotes from published authors.
